<p><i>Can you give an example of a bio-based product you use in your daily life?</i></p>	<p><i>What role do forests play in bioeconomy?</i></p>
--	--

<p>Bioeconomy is an economic system based on the sustainable use of renewable biological resources.</p>	<p>It is important to use renewable resources to reduce dependence on non-renewable resources and minimize environmental impact.</p>
<p>Plants are used in bioeconomy for food, fuel, fiber, and other materials.</p>	<p>Examples of renewable biological resources include plants, wood, and cotton.</p>
<p>Products made from renewable biological resources include paper, clothing, and biofuels.</p>	<p>Bioeconomy promotes sustainability by efficient use of resources, innovation, and reducing reliance on fossil fuels.</p>

OUR CONSORTIUM

<p>Challenges associated with implementing bioeconomy practices include technological limitations, market barriers, and policy issues.</p>	<p>Bioeconomy can reduce environmental impact by promoting the use of renewable resources, reducing waste, and lowering greenhouse gas emissions.</p>
<p>Everyday examples are the bio-based plastics, bio-based cleaning products, or bio-based cosmetics.</p>	<p>Forests play a crucial role in bioeconomy by providing wood for construction, pulp for paper production, and serving as a source of biodiversity and ecosystem services.</p>
