

### BIOECONOMY – MULTIPLE CHOICE QUIZ

What is bioeconomy?

- a) A system based on the use of fossil fuels
- b) An economic system that relies on renewable biological resources
- c) A method of farming that uses only synthetic fertilizers
- d) A process of recycling non-biodegradable materials

Which of the following is a renewable biological resource?

- a) Plastic
- b) Coal
- c) Cotton
- d) Aluminum

How are plants used in bioeconomy?

- a) Plants are used only for decorative purposes.
- b) Plants are used to produce biofuels, food, and materials like paper and textiles.
- c) Plants have no role in bioeconomy.
- d) Plants are used primarily for medicinal purposes.

Why is using renewable resources important in bioeconomy?

- a) Renewable resources are cheaper to produce.
- b) Renewable resources do not require land or water.
- c) Renewable resources can be replenished over time and have less impact on the environment.
- d) Renewable resources are more abundant than non-renewable resources.

What are some examples of products made from renewable biological resources?

- a) Plastic bottles
- b) Styrofoam cups

001

- c) Paper towels
- d) Cotton shirts

How does bioeconomy contribute to reducing environmental impact?

- a) By increasing pollution levels
- b) By promoting the use of non-renewable resources
- c) By minimizing waste and greenhouse gas emissions
- d) By accelerating deforestation

What are some challenges associated with implementing bioeconomy practices?

- a) Lack of public awareness
- b) Overabundance of renewable resources
- c) Low demand for sustainable products
- d) Limited technological advancements

Which of the following statements best describes the role of forests in bioeconomy?

- a) Forests have no relevance to bioeconomy.
- b) Forests provide timber for construction and pulp for paper production.
- c) Forests are primarily habitats for wildlife.
- d) Forests are only important for recreational purposes.
